

Enabling/Disabling

Overview

A Hub administrator can mass disable extensions (i.e.: plugins, components, modules), from the /administrator interface. This action allows an administrator to note all the related extensions to one specific feature on the Hub. Thus, if the administrator prefers to disable a feature on the Hub, they can mass disable all the related extensions so users do not find any traces of the feature on the Hub. Similarly, Hub administrators can mass enable extensions that have previously been disabled.

Enabling Hub Extensions

1. Navigate to **/administrator**
2. Hover over **Extensions** and select **Extension Manager**
3. Click **Manage** to view the list of extensions
4. **Check the box** beside the extension that you would like to enable
5. Click the **Enable** button in the upper right corner
6. Repeat steps 4-5 for all related extensions

Disabling Hub Extensions

1. Navigate to **/administrator**
2. Hover over **Extensions** and select **Extension Manager**
3. Click **Manage** to view the list of extensions
4. **Check the box** beside the extension that you would like to disable
5. Click the **Disable** button in the upper right corner
6. Repeat steps 4-5 for all related extensions
