

2.2.18

Changes

- Performance increase for Publication image.
- Publication Citations are now associated with individual versions of a Publication, rather than the Publication as a whole.
- Publication Tags are now associated with individual versions of a Publication, rather than the Publication as a whole.
- Administrator Interface: Member status is simplified for easier understanding with quick options for blocking, approving, etc.
- Groups: When deleting, the member must type the alias of the group to confirm deletion. This is an extra guard against accidental deletions.

New

- "My Publications" dashboard module. This module is sub-divided into two tabs: "Drafts" and "Published". Each tab displays publications you're currently working on or have published.
