

addrepo

Install

Install addrepo

```
# apt-get install hubzero-addrepo
```

Configure

The web process needs to be able to run a number of scripts as the "apps" user. To do this it is necessary to configure sudo to allow this:

Edit **/etc/sudoers** and add the following lines

```
www-  
data          ALL=(apps)NOPASSW  
D:/bin/bash /www/myhub/components/com_contribtool/scripts/*tool.php *  
www-  
data          ALL=(apps)N  
OPASSWD:/usr/bin/expect /www/myhub  
/components/com_contribtool/scripts/*tool.php *  
www-data      ALL=NOPASSWD:/etc/init.d/apache2
```

Be sure to replace "/www/myhub" with the document root you are using for your hub.
