

# Modules

## Overview

Most modules will have a set of parameters that can be configured. These parameters can determine what functionality is presented to the user, be a default set of user options, or settings needed for the module to function properly (setting the URL to a feed for a feed reader module, for instance). Accessing and adjusting these parameters is quick and easy.

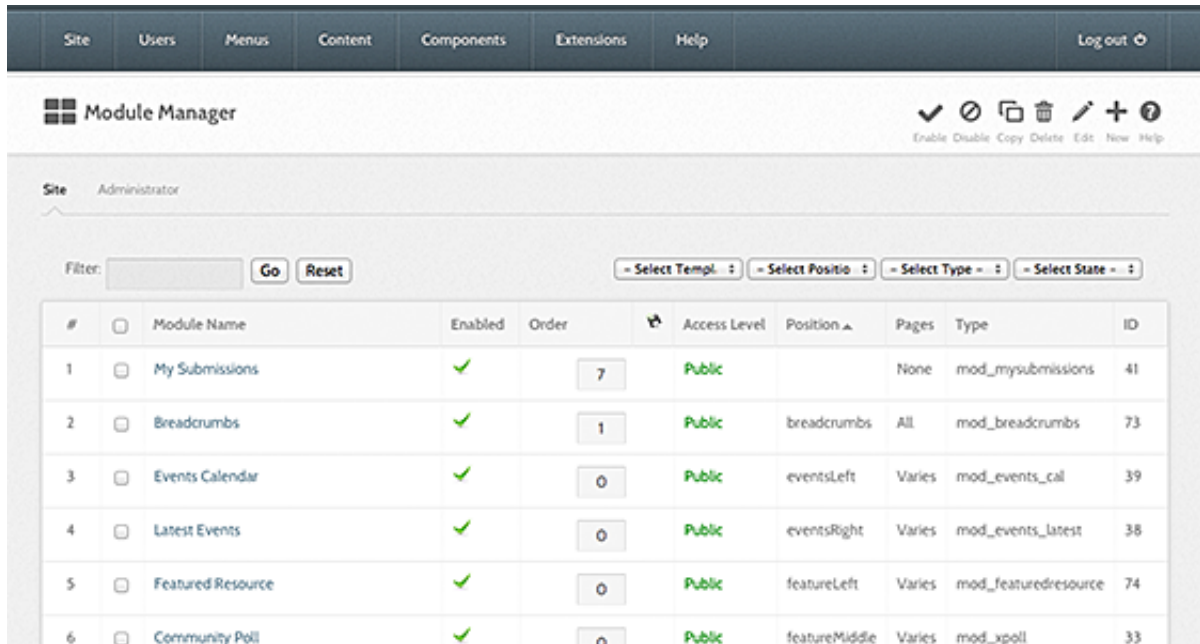

**Note:** Not all modules will have configurable parameters. For those that do, the configurations apply **only** to that module instance. You may have multiple instances of a module with different parameter configurations.

1. First login to the administrative back-end.
2. Once logged in, go to the "Module Manager." The Module Manager can be found by selecting "Extensions" > "Module Manager" from the drop-down menu on the back-end of your HUB installation.

3. Choose the module you wish to configure from the available list.

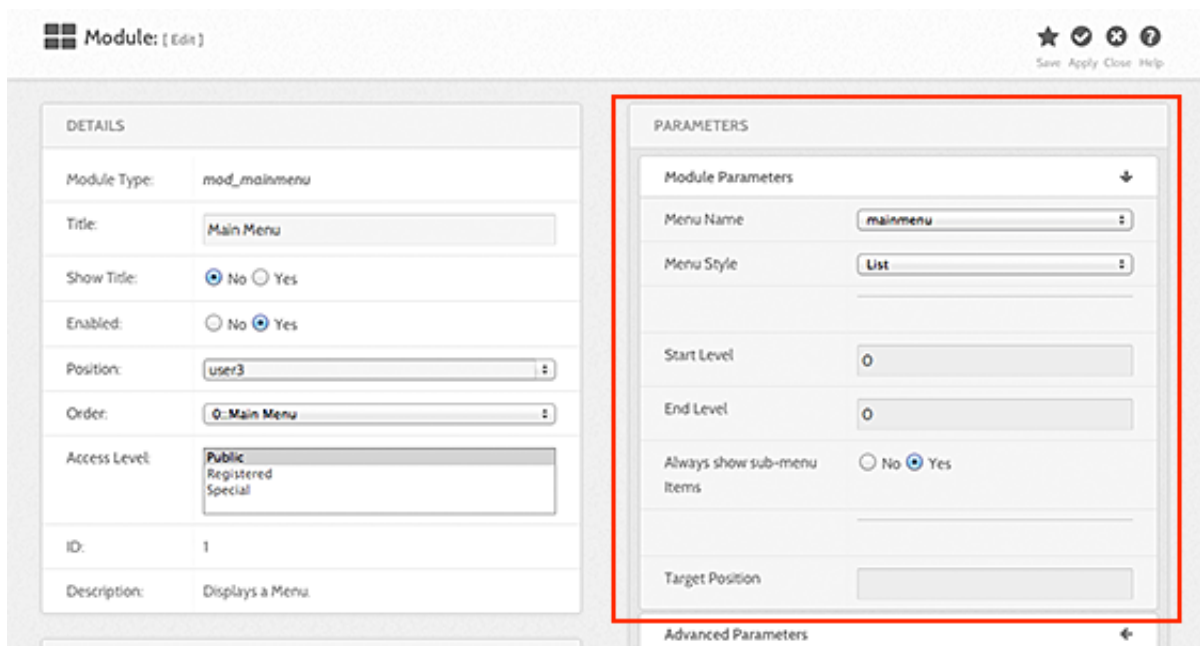

## MODULES

The screenshot shows the Joomla! Module Manager interface. At the top, there is a navigation bar with tabs for Site, Users, Menus, Content, Components, Extensions, and Help, along with a Log out button. Below the navigation bar, the title "Module Manager" is displayed, followed by a toolbar with icons for Enable, Disable, Copy, Delete, Edit, New, and Help. The main content area shows the site name "Administrator" and a filter section with a text input, "Go", and "Reset" buttons. Below the filter, there are four dropdown menus: "Select Templ.", "Select Positio", "Select Type", and "Select State". The main table lists the installed modules with the following data:

#	<input type="checkbox"/>	Module Name	Enabled	Order	<input type="checkbox"/>	Access Level	Position	Pages	Type	ID
1	<input type="checkbox"/>	My Submissions	✓	7		Public		None	mod_my submissions	41
2	<input type="checkbox"/>	Breadcrumbs	✓	1		Public	breadcrumbs	All	mod_breadcrumbs	73
3	<input type="checkbox"/>	Events Calendar	✓	0		Public	eventsLeft	Varies	mod_events_cal	39
4	<input type="checkbox"/>	Latest Events	✓	0		Public	eventsRight	Varies	mod_events_latest	38
5	<input type="checkbox"/>	Featured Resource	✓	0		Public	featureLeft	Varies	mod_featuredresource	74
6	<input type="checkbox"/>	Community Poll	✓	0		Public	featureMiddle	Varies	mod_xpoll	33

4. Once the page has loaded, find the "Parameters" grouping, found on the right-hand portion of the screen.

The screenshot shows the Joomla! Module Parameters configuration page for the "Main Menu" module. The page is divided into two main sections: "DETAILS" on the left and "PARAMETERS" on the right. The "PARAMETERS" section is highlighted with a red border. The "PARAMETERS" section contains the following fields:

- Module Parameters: dropdown menu
- Menu Name: text input field with value "mainmenu"
- Menu Style: dropdown menu with value "List"
- Start Level: text input field with value "0"
- End Level: text input field with value "0"
- Always show sub-menu Items: radio button group with "Yes" selected
- Target Position: text input field

At the bottom of the "PARAMETERS" section, there is a "Save" button (represented by a star icon) and an "Advanced Parameters" link.

5. Adjust the available parameters as needed and then click "Save" (the icon that looks like a star) in the upper right portion of the page. Changes take affect immediately.
