OpenVZ

Install

HUBzero makes extensive use of <u>OpenVZ</u> containers so it is recommended to use the OpenVZ enabled kernel on all HUBzero servers.

```
# apt-get install hubzero-openvz
```

Configure

hzcms configure openvz --enable

If configuration is successful it should prompt you to reboot the server to activate the new kernel.

reboot

Test

```
# vzlist
Container(s) not found
```

Or it will list the containers currently running if you check this on a running hub. The salient point being that the command doesn't issue any kind of error message.
