## Installation

## **Directories & File Structure**

The initial directory structure of a HUBzero install.

```
/hubzero
 /administrator
 /api
 /bin
 /cache
 /cli
 /components
 /images
 /includes
 /language
 /libraries
 /logs
 /media
 /migrations
 /modules
 /plugins
 /site
 /templates
 /tmp
 /unittest
 /vendor
 configuration.php
 index.php
htaccess.txt
 robots.txt
```

While this looks very much like past hub installs, there are some noticeable exceptions. Some directories vital to HUBzero functionality have been added. A quick explanation of the additional directories:

/api

HUBzero comes with an API for accessing data from the various components and extensions in a light-weight, speedy manner. This directory contains the entry point to the API and can be accessed by visiting http://yourhub.org/api

/migrations

This is where database migrations are stored and is vital to keeping an install up-to-

## **INSTALLATION**

date.

## /vendor

HUBzero uses <u>Composer</u> to manage several libraries that the framework employs. The vendor directory is the repository used and managed by Composer for those libraries and should not be directly altered.
