

# MySQL

## Install

```
# DEBIAN_FRONTEND=noninteractive apt-get install -y hubzero-mysql
```

If you leave off setting DEBIAN-FRONTED environment variable you will be prompted to enter a MySQL administrative password. This password will get reset at a later step.

If you already have mysql-server installed, be aware that the root password for mysql will get reset at a later step unless you take preventative action outlined here [<link to be added later>](#).

## Configure

Default configuration works well for starters. But for optimal performance you will need a database administrator capable of tuning your database to your hardware configuration and site usage.
