

# OpenVZ

## Install

HUBzero makes extensive use of [OpenVZ](#) containers so it is recommended to use the OpenVZ enabled kernel on all HUBzero servers.

```
# apt-get install hubzero-openvz
```

## Configure

```
# hzcms configure openvz --enable
```

If configuration is successful it should prompt you to reboot the server to activate the new kernel.

```
# reboot
```

## Test

```
# vzlist  
Container(s) not found
```

Or it will list the containers currently running if you check this on a running hub. The salient point being that the command doesn't issue any kind of error message.
