

# telequotad

## install

```
# apt-get install -y hubzero-telequotad
```

## Configure

In order for filesystems quotas to work they must be enabled when they are mounted. Determine which filesystem contains your home directories and add "quota" to the mount option of the corresponding entry in the /etc/fstab file. Only the filesystem with /home on it matters to telequotad.

If quotas weren't already in affect, the run something like the following (depending on your filesystem configuration) to start up the quota system.

```
# mount -o remount /  
# /etc/init.d/quota restart  
# hzcms configure telequotad --enable
```

## Test

```
# repquota -a
```

Should show disk usage for all users.

```
# apt-get install telnet  
# telnet localhost 300  
getquota user=admin  
status=good,softspace=0,hardspace=0,space=4096,files=1,remaining=0  
Connection closed by foreign host.  
#
```
