OpenVZ

Install

HUBzero makes extensive use of [OpenVZ](#) containers so it is recommended to use the OpenVZ enabled kernel on all HUBzero servers.

```
# yum install -y hubzero-openvz
```

Configure

```
############################################
skip for now, just reboot the server after installing
############################################
# hzcms configure openvz --enable
```

You should reboot the server after the openvz kernel is installed.

```
# reboot
```

Test

```
# vzlist
Container(s) not found
```

The vzlist command might list the containers currently running if you check this on a running hub. As long as the command does not return an error, your setup was successful.
