

Config

Global Configuration

Accessing the global site configuration:

```
$jconfig = JFactory::getConfig();
```

Retrieving a value from the configuration:

```
echo $config->getValue('config.sitename');
```

Component Configuration

Although rarer than accessing the global site configuration, sometimes it is necessary to access component-specific configurations. This can be done as follows:

```
$config = JComponentHelper::getParams('com_mycomponent');
```

Retrieving a value from the configuration:

```
echo $config->get('paramName');
```
