

# CMS

## Install

```
# apt-get install -y hubzero-cms-1.3.1
```

## Configure

```
# hzcms install example  
# a2dissite default default-ssl  
# a2ensite example example-ssl  
# /etc/init.d/apache2 restart
```

## Test

The default installation of the CMS uses a self signed SSL certificate. Some browsers will not accept this certificate and not allow access to the site.

<https://support.mozilla.org/en-US/questions/1012036>

You will need to install a proper SSL certificate.
