OpenVZ

Install

HUBzero makes extensive use of OpenVZ containers so it is recommended to use the OpenVZ enabled kernel on all HUBzero servers.

# yum install -y hubzero-openvz

Configure

###############################################################
skip for now, just reboot the server after installing
###############################################################
# hzcms configure openvz --enable

You should reboot the server after the openvz kernel is installed.

# reboot

Test

# vzlist
Container(s) not found

The vzlist command might list the containers currently running if you check this on a running hub. As long as the command does not return an error, your setup was successful.
