

Citations

Adding a Citation

1. Navigate to <https://yourhub.org/citations>.

2. On the Citations home page, click **Submit a citation**.

3. Start adding the Citation by selecting the **Type** of the Citation from the drop-down.

CITATIONS

4. Then, fill out all of the citation information that is needed.

1. **Note:** Information varies by citation type.

5. Fill in the **Title/Chapter** of the Citation.

6. Fill in the **Tags** and **Badges** for the Citation.

a. **Tags** are key words that are separated by commas. (Example: negf theory, ion transport)

CITATIONS

b. Badges are connecting words that indicate more complex tags. (Example: peer-reviewed,

evidence-based)

7. Fill in the type of the resource or publication being cited along with the ID number of the item that is to

be cited by this citation.

a. Find the ID number of the publication or resource by navigating to the page of the document

CITATIONS

and then in the URL you can locate the ID number.

8. Check the boxes to affiliate the organization with the citation and if your organization is to fund the

citation.

9. Click **Save** to save the new citation.?

Importing Citations

NOTE: The citations import functionality is not guaranteed to be open to all registered hub users. The hub administrators can configure it as an administrator-only feature or turn it off all together.

1. Navigate to <https://yourhub.org/citations>.

CITATIONS

2. On the Citations main page, click **Import citations**.

3. Upload a citation file.

a. Click **Choose** and select the citation file.

a. BibTex files (.bib), Text files (.txt), or EndNote files (.enw) are acceptable, but they

must not exceed 4 MB in size.

b. Click **Upload** once the file has been chosen.

4. Review the uploaded citations and choose the appropriate action to take for each uploaded citation.

5. Click **Save** to save the newly imported Citations.

Exporting a Single Citation

1. Navigate to **<https://yourhub.org/citations>** and click on **Browse the list of available citations**.
2. Locate the citation that you wish to export.
3. Click the blue links to choose how the citation is to be exported. The two links are different by the type of file they export the citation as (BibTex or Endnote).

Exporting Multiple Citations

1. Navigate to **<https://yourhub.org/citations>**.
2. Locate the Citations that you wish to export by clicking the **Browse the list of available citations**.
3. From the available list of citations, check the boxes of the citations that are to be exported.
4. On the side of the **Citations: Browse**, select the button of the format type that the exported citations should download as. A citation can be downloaded as an **EndNote** or a **BibTex**.
5. After selecting a format type, the citations will automatically be downloaded to your

browser's download area.

Member Citations

1. What is a member citation?

- a. This is a place to list the various publications and works you've authored or participated in. Show the world what you've done.

2. Okay I saved my settings, what do I do now?

- a. You start off with a blank slate. You can manually input your citations through a form or you can import supported file formats (currently BibTeX or EndNote).

3. I do not like the exiting citation formats, how do I make my own?

- a. You are allowed one custom format. You can create it by going into the Settings page, and selecting *Your custom format*. The textarea will preserve the previously selected format in case you would like to do not want to start from scratch. If you want to start from scratch, simply delete the existing text and enter the *Key* of the field you want to insert. You can do this by either manually typing it the key into the textarea or simply click on the row corresponding to the key/value you would like to insert.

4. Alright so I have entered or imported at least one citation, why is it yellow?

- a. When you import or manually enter a citation, it immediately goes into an unpublished state, meaning nobody but you can see the entry. You can "publish" the citation by clicking the publish button next to each individual citation or click the checkbox next to each citation you would like to publish and click "Publish selected citations".
 - i. Once you publish a citation, the yellow background will disappear and it shall be counted in the total number of citations for your profile.

5. So what can I do with citation entries as a group manager?

- a. You can do three things:
 - i. Publish & Un-publish entries
 - ii. Edit entries
 - iii. Delete entries
 - i. Delete puts the citation in the "trashed" status – meaning it is NOT fully deleted. A Hub Admin can only fully-delete the entry. If you accidentally delete a citation from your group, you can contact the hub administrator to republish your citation.

6. What is a COin?

- a. COinS (ContextObjects in Spans) is a simple, ad hoc community specification for publishing OpenURL references in HTML. In simpler terms, it is a method for embedding OpenURL data within a HTML page. There are plugins and other tools that can help locate the cited work in full-text in available areas on the Internet.

7. How do I associate an author of a citation with a my profile or another Hub User's profile?

- a. Within the edit form under the *Author(s)* field, the editor simply needs to start typing the member's **full name** or **username** and click the Add button. The autocompleting field should show the user's name and ID number to confirm the correct selection has been made. Once the association has been made, the user's name will appear in the entry as a link which will direct itself to the member's profile.
