WebDAV

Install WebDAV

apt-get install -y hubzero-webdav

Configure WebDAV

hzcms configure webdav --enable

Test

ls -l /webdav/home/admin
total 0

Browse to your site's https /webdav address (e.g. https://myhub/webdav). You should get prompted for a username and password. Use the admin account. You should see an empty directory listing and no error messages.

Now test using a WebDAV client.

```
# apt-get install cadaver
# cadaver https://localhost/webdav
```

You will be prompted to accept self signed certificate (if it is still installed) and then to enter your username and password. Use the 'admin' account again to test. When you get the "dav:/webdav/>" prompt just enter "Is" and it should show the test file.

Finally clean up test case

apt-get purge cadaver

Troubleshooting

If the test doesn't work, check if the fuse kernel module is loaded

lsmod | grep fuse
fuse 54176 0

If there is no output then try starting the kernel module manually

modprobe fuse

Then try the test again
