# 2.1.10

## **BLOG**

- Fixing docblock, adding missing relationship for comment back to entry, adding more tests.
- Adding unit tests for ORM models.

#### **CITATIONS**

- Migration and changes to edit form to allow for specifying the context of a citation to its associated resources.
- Minor HTML changes to fix validation errors and improve accessibility.

#### **COLLECTIONS**

- Fixing incorrect HTML tag.

#### **DATAVIEWER**

- Removed #dv\_top suffix from filtering urls.
- Fixed the gallery view.

### **EVENTS**

Changing font size declaration to use EMs for better accessibility.

## **GROUPS**

- Adds redirect and prevents promoting/demoting when nothing is selected.
- Must select a user before promoting or demoting.
- Prevents deleting the last manager.

## **MEMBERS**

- Sort by 'surname', instead of 'name'.
- Allow for exporting members by the current set filters.
- Adding before and after events for saving profile data.

#### **PROJECTS**

- Add .gitignore to the list of files to skip.
- Changing (tool/file) handler base path to a path pattern to better accommodate varying directory structures.
- Adding before and after delete triggers and method for getting params Registry object.
- Adding ORM models.

#### **PUBLICATIONS**

- Add 'featured' flag to a publication, let admins make the publication 'featured'.
- Show a 'unchanged' message if there is no diff info.
- Make sure sub queries return only one record.

#### RESOURCES

- Add configuration option to resource files which can prevent direct download of files if opened with a viewer.
- Show the file type for course notes.

## **SEARCH**

- Fixing incorrect 'for' attribute on label.

#### SYSTEM

- Have some plugins only respond when application is 'site'. This improves performance and avoids potential code being called when not desired.

# **TAGS**

- Modified interface so HTML is consistent between PHP and Javascript and fixing some issues with deleting focus area groups.

#### **TOOLS**

- Docblock fixes, formatting fixes, and some extra escaping of SQL inputs.
- Fallback to retired versions if no published version can be found.

## **WISHLIST**

- Remove reference to wish creator's name in case they posted anonymously.

### Other

- Fix the ORCID search issue.
- (tpl\_kimera) Removing unnecessary 'role' attribute for HTML5 validation.
- (tpl\_kimera, mod\_reportproblems) Minor adjustment to colors to improve accessibility contrast ratios.
- (framework) Nested set database column for Nested relational models renamed from 'depth' to 'level' to conform to current usage.

- (muse) Unit tests can be discovered and run from components, modules, plugins, and templates.
