

Boosting

Search boosting allows hub administrators to move categories of matching results higher or lower in Solr search results.

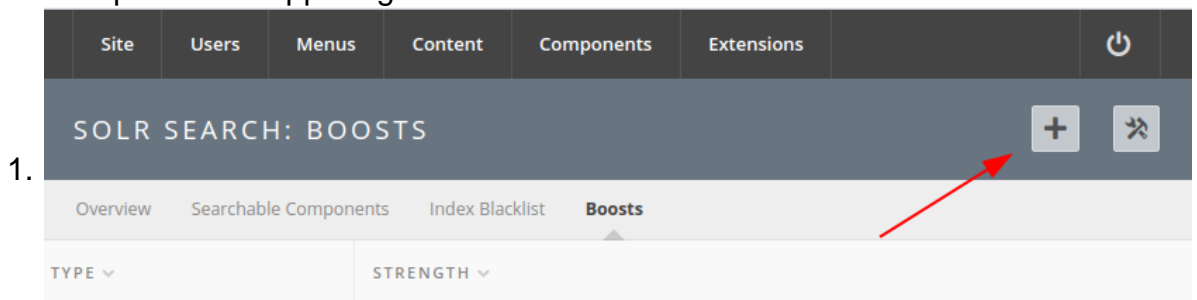

Note: your hub must have Solr installed and enabled as boosting only affects Solr search results.

To create a boost follow the steps below:

1. Access your hub's administrator portal
2. Click on Search under the Components drop-down menu
3. Click on the Boosts tab under the component title bar

4. Click on the plus in the upper right hand corner

5. Select a category from the Type drop-down

- 1.

BOOSTING

Site Users Menus Content Components Extensions

SOLR SEARCH: NEW BOOST

DETAILS

Type:
1.3.1 Test Resource Type

Strength:

6. Enter a number for the boost strength
 1. Positive value moves matching results higher
 2. Negative value moves matching results lower
7. Save the boost
