## Commit Messages

Git commit messages are generally comprised of three sections: a short summary, a longer explanation, and links to references. Starting with this structure forces you to answer why the change is necessary before outlining the changes that you have made.

- The summary should be no longer than 50 characters
- The summary should be tagged with what type of commit it is. For example, "[feat] Added a new feature" or "[fix] Fixed a bug".
- Each line of the explanation should wrap at 72 characters
- If a commit fixes an issue, it should be denoted with Fixes: {url}
- If a commit references another commit, outside source, etc, it should be denoted with Refs: {url}

The summary is required but the longer explanation and refs may not always be necessary or apply to the situation at hand.

### Template

You can tell Git to use a template for commit messages with this structure. This is done by setting commit.template in ~/.gitconfig:

```
[commit]
    template = ~/.gitmessage
```

Then create ~/.gitmessage with the following:

```markdown
#-----------------------50-----------------------|
#Summary (50 characters)

#-----------------------72-----------------------|
#Explanation (wrap around 72 characters (80 - short indent on either side))

#-----------------------72-----------------------|
#Refs:
#Fixes:
```
#----------------------------------72---------------------------------

-|

# Type can be
# feat (new feature)
# fix (bug fix)
# refactor (refactoring production code)
# style (formatting, missing semi colons, etc; no code change)
# docs (changes to documentation)
# test (adding or refactoring tests; no production code change)
