Elements & Typography

Grid (Columns)

For laying out content on a page, the core hub framework includes styles for a 12-column grid.

...  
...  
...  
...  
...  
...  
...  
...  
...  
...  

The grid supports up to 12 columns with span# and offset# classes.

Each column **must** have a .col class. The last column in a set must have the .omega class added for IE 7 to work properly. No clearing div is required.

For example, a four column grid would look like:

```html
<div class="grid">  
  <div class="col span3">...</div>  
  <div class="col span3">...</div>  
  </div>  
  <div class="col span3">...</div>
```

Spanning Columns

Columns can be spanned to easier portion content on the page. In the following example, we span the first 6 columns in a container, then follow with two, smaller 3 column containers for a 3-column layout where the first column takes up 50% of the space.

```html
<div class="grid">
  <div class="col span6">
    ...
  </div>
  <div class="col span3">
    ...
  </div>
  <div class="col span3 omega">
    ...
  </div>
</div>
```

Output:

...
Offsets

Columns may also be offset or 'pushed' over.

```html
<div class="grid">
  <div class="col span3 offset3">
    ...
  </div>
  <div class="col span3">
    ...
  </div>
  <div class="col span3 omega">
    ...
  </div>
</div>
```

Output:

```
...
...
...
```

Helper Classes

- `.span-quarter`
  - Span 3 columns. This is equivalent to `.span3`
- `.span-third`
  - Span 4 columns. This is equivalent to `.span4`
- `.span-half`
  - Span 6 columns. This is equivalent to `.span6`
- `.span-two-thirds`
  - Span 8 columns. This is equivalent to `.span8`
.span-three-quarters
  Span 9 columns. This is equivalent to .span9

A four column grid with the helper classes:

```html
<div class="grid">
  <div class="col span-quarter">
    ...
  </div>
  <div class="col span-quarter">
    ...
  </div>
  <div class="col span-quarter">
    ...
  </div>
  <div class="col span-quarter omega">
    ...
  </div>
</div>
```

There are equivalent .offset- classes as well:

```html
.offset-quarter
  Offset 3 columns. This is equivalent to .offset3
.offset-third
  Offset 4 columns. This is equivalent to .offset4
.offset-half
  Offset 6 columns. This is equivalent to .offset6
.offset-two-thirds
  Offset 8 columns. This is equivalent to .offset8
.offset-three-quarters
  Offset 9 columns. This is equivalent to .offset9
```

Markup for a four column grid with the offset helper class:

```html
<div class="grid">
  <div class="col span-quarter">
    ...
  </div>
  <div class="col offset-quarter span-quarter">
    ...
  </div>
  <div class="col span-quarter omega">
    ...
  </div>
</div>
```
Nesting Grids

The following is an example of a 3 column grid nested inside the first column of another 3 column grid.

```html
<div class="grid">
  <div class="col span6">
    <div class="grid">
      <div class="col span4">
        ...
      </div>
      <div class="col span4">
        ...
      </div>
      <div class="col span4 omega">
        ...
      </div>
    </div>
  </div>
  <div class="col span3">
    ...
  </div>
  <div class="col span3 omega">
    ...
  </div>
</div>
```
Notifications

The core framework provides some base styles for alter and notifications.

<p class="passed">Success message</p>

Sections & Asides

The majority of hub components have content laid out in a primary content column with secondary navigation or metadata in a smaller side column to the right. This is done by first wrapping the entire content in a div with a class of .section. The content intended for the side column is wrapped in a `<div class="aside">` tag. The primary content is wrapped in a `<div class="subject">` tag and immediately follows the .aside column.

Note: The .aside column must come first in order for the content to be positioned properly. If, unfortunately, this poses a semantic problem, we recommend using the grid system as a potential alternative.

Using aside & subject differs from the grid system in that the .aside column has a fixed width with the .subject column taking up the available left-over space. In the grid system, every column is flexible (uses a percentage of the screen) and cannot have a specified, fixed width.

Example usage:

```html
<section class="section">
  <div class="section-inner">
    <div class="aside">
      Side column content ...
    </div>
    <div class="subject">
      Primary content ...
    </div>
  </div>
</section>
```
<a class="btn" href="#">default</a>

<a class="btn disabled" href="#">disabled</a>

<a class="btn active" href="#">active</a>

**Size**

- primary
- secondary

<a class="btn btn-primary" href="#">primary</a>

<a class="btn btn-secondary" href="#">secondary</a>

**Type**

- link
- button

<a class="btn" href="#">link</a>

<button class="btn" href="#">button</button>

<input type="submit" class="btn" value="input" />

**Color**

- danger
- warning
- info
- success

<a class="btn btn-danger" href="#">danger</a>

<a class="btn btn-warning" href="#">warning</a>

<a class="btn btn-info" href="#">info</a>

<a class="btn btn-success" href="#">success</a>
