Configuring and Managing Your Hub: Home Page Customization – Activity Solutions

Step 1: Modify the home article page and add the following positions in a three column layout: homeLeft, homeMiddle, and homeRight

1. Log in to the administrative interface (*myhub.org*/**administrator**)
2. Navigate to "Content -> Article Manager" and find the "Home" article
3. Modify the home page text to look as follows:

```
{xhub:include type="stylesheet" filename="home.css"}
<div class="firstset">
<div class="three columns first">{xhub:module position="homeLeft"}</div>
<div class="three columns second">{xhub:module position="homeLeft"}</div>
<div class="three columns third">{xhub:module position="homeRight"}</div>
</div>
<div class="clear"></div>
```

Step 2: Find the modules that you want to add, and assign them to those positions - add a custom module, a featured module, and a latest events module

1. Navigate to "Extensions -> Module Manager"
2. Next, select "New"
3. Select "Custom HTML" from the list
4. Now fill in the correct information…make sure to:
   a. Give it a "Title"
   b. Be sure "Enabled" is "yes"
   c. Give it the position "homeLeft"
   d. Set it to display on the correct page (i.e. the home page)
   e. Fill in the HTML text box at the bottom to include something fun for your home page
5. When all of this has been done, click "Save"
6. Iterate through this process for the remaining two modules
   a. The second one will be a "Featured Resource" module and have the position "homeMiddle"
   b. The third one will be a "Latest Events" module and have the position "homeRight"
